Education

University of Guelph

Bachelor of Computing (Honours), Computer Science

Guelph, Ontario

Graduation: Dec 2027

- Cross-enrolled at University of Waterloo: Application Development, User Interface, Human-Computer Interaction
- Coursework: Data Structures & Algorithms, Object-Oriented Programming, Software Engineering

Experience

Software Developer Intern

Tangerine

Toronto, Canada

May 2026 – Aug 2026

- **Eliminated manual handling of sensitive data** in QA automation by building a shared hashing utility, consolidating duplicate implementations across the test automation suite and reducing rework for QA teams.
- **Operated and deployed a production Java Spring Boot microservice across 2 GCP environments** using Kubernetes, Helm, and Jenkins CI/CD, debugging application and infrastructure failures to improve deployment reliability.
- **Closed a production visibility gap** by building GCP Logging and automated alerting for unauthorized endpoint access that had previously gone undetected, surfacing issues directly to downstream engineering teams.

Software Engineer Intern

TD Bank

Toronto, Canada

Jan 2026 – Apr 2026

- **Cut legacy service analysis time from weeks to 2 days** by designing an AI-assisted developer workflow that traced system behavior and generated structured Spring Boot and Angular migration plans.
- **Improved backend maintainability** by applying the Command Pattern to consolidate duplicated service logic into reusable, testable components with clearer execution paths across the codebase.
- **Achieved 90%+ test coverage** by building JUnit and integration tests that validated edge cases and reduced regression risk across modernized services during active development.

Software Engineer Intern

Sertus

Toronto, Canada

May 2025 – Jan 2026

- **Built complaint and incident management workflows** with case status tracking, employee assignment, audit history, and admin review using React, Node.js REST APIs, and PostgreSQL.
- **Reduced manual administrative work by 60%+** by owning a production workflow platform end-to-end as the sole engineer, replacing paper-based form routing with a digital admin board.

Projects

uoguelph.courses – Co-Founder & Tech Lead [Live](#) | TypeScript, Next.js, PostgreSQL, REST APIs

- **Scaled a production platform to 6,000+ users** by owning backend architecture, frontend systems, deployment, and day-to-day production operations as co-founder.
- **Supported 1,000+ new users/month** by designing REST APIs and PostgreSQL data models and optimizing queries, indexes, and caching to keep the platform responsive at scale.
- **Improved production reliability** by monitoring application health and resolving live issues, query bottlenecks, and performance regressions before they significantly affected users.

TransitFlow | Python, FastAPI, TypeScript, GTFS

- **Served 272 monthly active users** and 3,100+ page views by building Python/FastAPI backend services and REST APIs over processed, schedule-accurate transit data.
- **Built an automated GTFS ingestion pipeline** that transformed raw transit feeds into normalized route, stop, schedule, and geospatial datasets across 900+ scheduled trips.
- **Generated 8 deployment-ready artifacts in under 5 minutes** by validating and normalizing inconsistent datasets through an automated ingestion pipeline.

Leadership

Tech Lead & Organizer

HackCanada

Remote

Sept 2025 – Present

- **Delivered 3 production systems for 700+ hackers** and 200+ projects by leading 4 developers and owning architecture, technical delivery, and deployment for the event.
- **Kept critical event infrastructure operational** by owning live debugging, production fixes, and deployment across judging and CTF systems throughout the event.

Technical Skills

Languages & Frameworks: Java, Python, TypeScript, JavaScript, SQL, Spring Boot, FastAPI, Node.js, React

Infrastructure & Systems: GCP, Kubernetes, Docker, Helm, Jenkins, CI/CD, Git, PostgreSQL, REST APIs, OpenAI APIs
